

HR Employee Attrition & Retention Analysis – Key Insights Summary

1. Overall Attrition

- Total Employees: 1k
- Attrition Count: 237
- Attrition Rate: 16.1%

2. Department Analysis

- The highest attrition was observed in the Sales department.
- Research & Development showed moderate attrition.
- Human Resources had the lowest attrition count.

3. Employee Profile

- Employees with shorter tenure (0–3 years) were more likely to leave.
- Younger employees showed higher turnover rates compared to older employees.

4. Overtime Impact

- Overtime emerged as one of the strongest predictors of attrition.
- Employees working overtime were significantly more likely to leave the organization.

5. Work-Life Balance

- Employees with lower WorkLifeBalance ratings exhibited higher attrition rates.
- Improving flexibility and workload management may help retention.

6. Job Satisfaction

- Attrition was higher among employees reporting low JobSatisfaction scores.
- Employee engagement initiatives could reduce turnover.

7. Environment Satisfaction

- Lower EnvironmentSatisfaction scores were associated with increased resignations.
- Workplace culture and employee experience appear to influence retention.

8. Compensation

- Employees who left generally had lower average monthly incomes than employees who stayed.

- Compensation competitiveness should be reviewed for high-risk roles.

Conclusion

The primary drivers of attrition are Overtime, low WorkLifeBalance, low JobSatisfaction, and shorter tenure. Focused retention programs targeting these areas can help reduce employee turnover and improve workforce stability.
